DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, 5-11 and 18-20, drawn to methods of treating a skin or hair condition, classified in class 424, subclass 70.1.
 - II. Claims 14-17, drawn to a method of treating acne, classified in class 424, subclass 401.
 - III. Claims 21-26, drawn to a method for improving the aesthetic appearance of the skin, classified in class 424, subclass 65.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to the treatment of different skin conditions, as Group I is directed to the treatment of cellulite, oily skin, oily scalp or blemishes, and Group II is directed to the treatment of skin affected by acne. Since the skin conditions treated by the method of Group I are different from the skin condition treated by the method of Group II, the two methods may have different modes of operation and different effects.
3. Inventions III and I are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

inventions are directed to the treatment of different skin conditions, as Group I is directed to the treatment of cellulite, oily skin, oily scalp or blemishes, and Group III is directed to the improvement of the skin by reducing oil production. The two methods have different modes of operation and different effects.

4. Inventions III and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to the treatment of different skin conditions, as Group II is directed to the treatment of skin affected by acne, and Group III is directed to the improvement of the skin by reducing oil production. The two methods have different modes of operation and different effects.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
